

If there was a fire in your office, would your critical data be safe?

In today's increasingly computerized world, it takes more than just tapes or external hard drives to have your data reliably backed up. It takes a comprehensive solution that includes both on-site backup for rapid recovery and off-site backup for true disaster recovery.

Until recently, this level of protection has been unattainable for small to medium businesses. However, with recent advances in technology, this level of security and protection is now both available and affordable.

The Datto Backup device provides a simple, comprehensive solution. Each Datto device provides both a complete on-site backup and a secure reliable off-site backup. This combination of services provides the benefits of on-site backup while ensuring data integrity, regardless of what failure or disaster may occur at your physical location.

When disaster strikes, Datto is there to help you get back on your feet. Datto can have all of your critical data restored and delivered to your location in under 24 hours. In addition, technicians continuously monitor the status and security of each Datto device, ensuring your critical data is safe and secure at all times.

70% Of businesses that suffer a serious data loss are out of business in 2 years

Leading Causes of Data Loss

Features and benefits of the Datto Backup device

- ▶ Up to 500 Gigabytes of both on-site and off-site backup
- ▶ Security Guaranteed, AES 256 and SSL encryption
- ▶ 24 / 7 Customizable backup monitoring
- ▶ Free customer support
- ▶ One device can provide off-site backup for many computers
- ▶ Compatible with Windows, Mac, or Linux
- ▶ Rapid recovery. In the event of data loss your data can be restored delivered to your location in under 24 hours

Digging Deeper...

100% Compatibility

Datto devices are compatible with most modern operating systems. Datto uses industry standard SAMBA networking to interface easily with your existing Windows network. OS X and Linux-based computers can interface with Datto through either SAMBA networking or NFS. We are dedicated to making each Datto device work within your setup, whatever that may be. Our engineers are always working on new features to make every Datto better.

Saves resources - Reduces Vulnerabilities

Because the task of compressing and transferring data off-site is handled by each Datto device, the computers you are backing up are never tied up or slowed down by uploads. The patent pending design of the Datto device means there are no changes that need to be made to your existing firewall. Datto devices are monitored 24/7 and updates are applied automatically keeping your device secure and up to date.

Seriously Secure

Datto takes data security seriously. Each box communicates with our servers using AES + SSL key based encryption. This encryption is more robust than what your bank uses for online banking. Data backups at our locations are stored on encrypted multiple redundant drives in secure facilities. In the event your Datto device is stolen or tampered with, it can be commanded to permanently destroy all data, and then send back information to help authorities locate the thief.

Satisfaction Guaranteed

Every device sold comes with a 30 day money back guarantee. In addition each device comes with up to a 5 year all inclusive warranty.
